Quality is a necessity not a luxury.

We believe the value of using the finest medical products becomes self-evident when success in both procedure and patient satisfaction is at stake. In surgery, as in most things, choosing the best is also choosing the most reliable outcome.

Industry expertise.

• Strict US and EU manufacturing standards; devices from our Leiden facility have received CE Marking of conformity, our Texas facility is FDA registered and is regularly inspected by the FDA
• MENTOR® Breast Implants currently manufactured and marketed in EMEA are not approved by the FDA
• Shell physical properties exceed industry strength standards
• Highly compliant shell for ease of placement
• Supported by a lifetime replacement policy. Additionally, it is supported by PatientSafe Coverage Limited warranty as Patient Care Promise limited warranty
• Proprietary silicone gel formula for a natural feel that resembles breast tissue

Common gel myths.

Cohesion confusion.

There is an old misconception among some patients and surgeons concerning silicone gel. All of Mentor’s gels are cohesive polymers, not liquids. The gel material holds together firmly. MemoryGel™ Breast Implants are filled with a cohesive gel that acts more like a solid rather than a liquid thereby maintaining its shape.

The myth of bleed.

The overall body of available evidence supports that the extremely low level of gel bleed for MemoryGel™ Breast Implants is of no clinical consequence.‡

Cohesive I and Cohesive II.

Cohesive I is a very cohesive gel which does not move about and is more resistant to deformation than Cohesive II. Cohesive II is still a cohesive gel but is more fluid-like than Cohesive I. It is possible that Cohesive I may last longer than Cohesive II and have a lower risk of capsular contracture.

Choosing breast implants from a company recognized all over the world for technological excellence and product support is a critical investment for the physician. Not to mention a significant resource to patients. Key to our superb record:

• An extensive history in research and testing
• Our strict US and EU manufacturing standards; devices from our Leiden facility have received CE Marking of conformity, our Texas facility is FDA registered and is regularly inspected by the FDA
• MENTOR® Breast Implants currently manufactured and marketed in EMEA are not approved by the FDA but do comply with CE-Mark requirements
• PatientSafe Coverage limited warranty or Patient Care Promise limited warranty as MENTOR® MemoryGel™ Breast Implants

Important Safety Information:

MENTOR® MemoryGel™ Breast Implants are indicated for breast augmentation, in women who are at least 18 years old, or for breast reconstruction.

There are risks associated with breast implant surgery. Breast implants are not lifetime devices and breast implantation is not necessarily a one-time surgery. Breast implant surgery should not be performed on women with active infection anywhere in their body, those with existing cancer or pre-existing breast disease, or those who have not received adequate treatment for these conditions or those who are pregnant or nursing.

Breast Implants are filled with a cohesive, gelatin-like material that acts more like a solid rather than a liquid.™

Your patient needs to be informed and understand the risks and benefits of breast implants, and she should be provided with an opportunity to discuss these with you. For detailed indications, contraindications, warnings and precautions associated with the use of all MENTOR Implantable Devices, please refer to the Product Information. Breed packed with each product, or review the Important Safety Information provided at www.mentorwwllc.com.
All cohesive, all the time™.

More styles. More choices.

More ways to achieve the optimal outcome.

Successful procedures strike a unique balance between selecting an implant most appropriate to body type while addressing patient expectations. By offering diversity in size, profile and texture, Mentor provides surgeons more options to achieve the best fit.

Round: And renowned

MENTOR® MemoryGel® Breast Implants—A trusted choice

MENTOR® MemoryGel® Breast Implants have been trusted by 35 million women worldwide. Why? MemoryGel® Implants are filled with Mentor’s proprietary cohesive gel, which holds together uniformly while resisting the natural feel of breast tissue. Mentor has conducted seven silicone gel breast implant clinical studies. Over 200,000 women have participated in these studies to provide a solid body of clinical evidence demonstrating the safety and effectiveness of silicone gel filled breast implants.

As we have to date, Mentor will remain committed together uniformly while resembling the natural feeling implant. This gel is used in SILTEX™ Texture and Smooth Round Moderate, Moderate Plus, High, Ultra High Profile Gel Breast Implants, as well as BECKER® Expander/Breast Implants.

Cohesive™

A slightly firmer gel, for patients wanting a firmer feeling implant. This gel is used in SILTEX™ Texture Round Moderate, Moderate Plus, and High Profile Gel Breast Implants and CONTOUR PROFILE™ BECKER® Expandable/Breast Implants.

Introducing

Our New Warranty

Means extra peace of mind for your MENTOR® Silicone Gel-Filled Breast Implants

PatientCare®Promise

For all other MENTOR® Breast Implants, please refer to the Mentor Gelfilled Breast Implant Replacement Policy.

A Picture is Worth a Thousand Words

We have cut a MemoryGel® Breast implant in half to demonstrate how the geometrical solids together uniformly. MemoryGel® Implants are filled with a cohesive, gelatin-like substance that acts more like a solid rather than a liquid, thereby maintaining its shape.

Mentor’s adherence to strict quality manufacturing requirements has resulted in silicone shells that have been tested and shown to possess excellent strength, resilience and elasticity.

cohesive silicone

Success has a formula.

All MENTOR® Silicone Gel-Filled Breast Implants contain gel that is cohesive, soft and aesthetically pleasing.

Cohesive™

The standard cohesive level gel used in MENTOR® Implants. This is Mentor’s softest gel and has been preferred for years in SILTEX™ Texture and Smooth Round Moderate, Moderate Plus, High, Ultra High Profile Gel Breast Implants, as well as BECKER® Expander/Breast Implants.

Cohesive™

A slightly firmer gel, for patients wanting a firmer feeling implant. This gel is used in SILTEX™ Texture Round Moderate, Moderate Plus, and High Profile Gel Breast Implants and CONTOUR PROFILE™ BECKER® Expandable/Breast Implants.
